[EXPERIENCE - PROJECTS](#) – [GitHub](#)

Streaming Tracker — [Code](#) — C# Windows Form

The app was designed to store tv shows and movies that you want to keep track of. Consists of multiple forms, a user log-in, and text documents to achieve this.

Entertainment Website — [Code](#) — HTML, CSS, jQuery

A group project that achieved displaying entertainment topics using basic web technologies. A great example of my knowledge, troubleshooting, and teamwork.

Environmental Controller — [Code](#) — LAMP Framework, PHP, JSON

Created a microcontroller to regulate environmental conditions to increase efficiency and reduce human error. I used a Raspberry Pi(Linux) to run an Apache web server that hosted a MySQL Database and multiple Python programs.

[EDUCATION](#)

Google IT Automation with Python Specialization — Coursera Certificate

January 2020 – March 2020

- **Course Highlights:** Automation with Python, Git, Debugging, Linux Command Line, Google Cloud Management / Configuration.
